**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Some very high UV levels expected so sun protection is recommended if you plan to spend much of the day in the mountains. Warm temperatures also bring a risk of dehydration and heat stress, especially on long climbs. Adequate water is advised.

Recent rainfall: measured at Neuadd: altitude 353m

Forecast for Wednesday 16 Jun 2021

Weather: Cloud will increase from the north and west overnight leading to a cloudier start to the day on Wednesday, with a few outbreaks of light rain or drizzle west of Craig-y-nos. Cloud should break a little during the course of the day with some sunny/brighter spells developing from late morning into the afternoon. Clouding over again from late afternoon with an increasing risk of showers, potentially thundery during the evening and overnight.

Maximum wind: Southwesterly 10-15mph gusting 20-25mph.

Chance of cloud free mountain/hill tops above 600m: 50% rising to 80% from late morning, reducing to 50% during the evening.

Visibility: Poor across western summits with cloud bases close to 500-600m, elsewhere generally good, with cloud bases above summits. Visibilities improving across all areas during the morning becoming very good however, sudden deteriorations are possible from late afternoon in association with potentially thundery showers later.

Temperature: **Valleys:** Plus 10 Celsius, rising to plus 18 Celsius.
At 600m: Plus 6 Celsius, rising to plus 15 Celsius.
Freezing level: Above summits.
